

Draw the circuit of OP-AMP as voltage to current converter with (i) grounded load, (ii) bridge amplifier and explain their operation. 10

(b) Draw the circuit of OP-AMP as voltage to current converter with (i) grounded load, (ii) floating load and explain their operation. 6

UNIT - IV

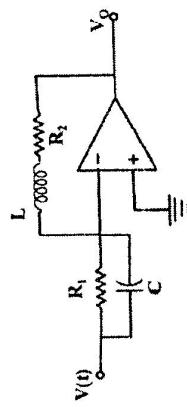

8. (a) Design weight resistor type digital to analog converter along with its digitally controlled switch. 8

(b) Design triangle wave generator using op-amp. 8

9. (a) Describe antilogarithmic amplifier and first order Butterworth using op-amp. 10

(b) Find the Output voltage in term of the variables provided in the figure below. Assume op-amp as an ideal one. 6

10. (a) Describe external photoelectric effect detectors with examples. 4

1. (a) Describe external photoelectric effect detectors with examples. 4

(b) What are the advantages of FM over AM ?

- (c) Describe OP-AMP as stable AC - coupled amplifier.
- (d) Describe OP-AMP as sample and hold circuit.

UNIT - I

- 2.** (a) Explain the construction & working of solar cell.
Find its open circuit voltage, short circuit current
& fill factor. 10
- (b) Describe the construction and process of
generation of photocurrent in microchannels. 6
- 3.** Explain the construction and working of:
(a) Photomultiplier tubes 8
(b) Avalanche photodiode. 8

UNIT - II

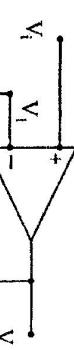

- 4.** (a) An AM transmitter has antenna current of 2 A
with modulation index of 60 percent. What will be
the total antenna current if one more identical
antenna is connected in parallel with the previous
one, keeping the transmitter output same? Will it
affect modulation index? 8
- (b) Describe pulse width modulation and pulse code
modulation. 8

UNIT - III

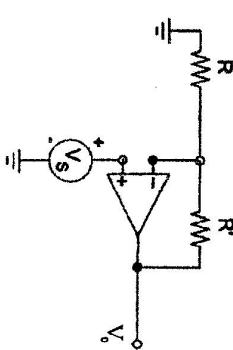

- 6.** (a) Draw the circuit of an emitter coupled different
amplifier and explain why $CMRR \rightarrow \infty$ for
symmetrical circuit with $R_e \rightarrow \infty$.

(b) Find the output V_o in the circuit below with $\Lambda = 105$, $V_i = -1$ V, $R_1 = 125$ k Ω and $R_2 = 25$ k Ω . also

find V_i at amplifier input:

- 7.** (a) OP-AAMP having infinite input resistance, $r_{in} \gg 10^6$ ohm
output resistance and a voltage gain A_v . For the
given circuit, find the gain with feedback (A_{vf}):

(3)
