

B.Tech. 3rd Semester (G-Scheme)
(Mechanical & Automation) Examination,

December-2023

NUMERICAL ANALYSIS & PROGRAMMING

Paper-BSC-MA-201-G

Time allowed : 3 hours]

[Maximum marks : 75

Before answering the questions, candidates should ensure that they have been supplied the correct and complete question paper. No complaint in this regard, will be entertained after examination.

Note : Attempt five questions in all, selecting one question from each unit. Question No. 1 is compulsory. All questions carry equal marks.

1. (a) Define condition for the convergence of iterative method. $6 \times 2\frac{1}{2} = 15$
- (b) Prove that $(1 + \Delta)(1 - \nabla) = 1$
- (c) Write Gauss's forward and backward interpolation formula.
- (d) Using Euler's method find $y(0.2)$ for given first order differential equations $\frac{dy}{dx} = y - x^2 + 1$ and $y(0) = 0.5$
- (e) Evaluate $\int_4^{5.2} \log_e x \, dx$ by trapezoidal rule by taking $h = 0.2$.
- (f) Write a C++ program which prints all odd positive integers less than 100, omitting these integers divisible by 7.

Unit-I

2. (a) Find the real root of the equation $x^3 - 2x - 5 = 0$ by the method of false position correct to three decimal places.
- (b) Find the root of the equation $x \sin x + \cos x = 0$ using Newton - Raphson method. 15
3. (a) Using Gauss - Jacobi method, solve the following system of equations :
- $$x + 17y - 2z = 48$$
- $$30x - 2y + 3z = 75$$
- $$2x + 2y + 18z = 30$$
- (b) Represent the following functions in factorial polynomial and their successive forward differences, taking $h = 1$.
- (i) $x^4 - 12x^3 + 42x^2 - 30x + 9$
- (ii) $x^4 + 3x^3 - 5x^2 + 6x - 7$ 15

Unit-II

4. (a) From the following data, find y at $x = 43$ and $x = 84$.
- | | | | | | | |
|-------|-----|-----|-----|-----|-----|-----|
| $x :$ | 40 | 50 | 60 | 70 | 80 | 90 |
| $y :$ | 184 | 204 | 226 | 250 | 276 | 304 |
- Also express y in terms of x using Newton's interpolation formula.

- (b) Use Lagrange's interpolation formula to find the value of $f(x)$ corresponding to $x = 27$ from the following data :

x:	14	17	31	35	
y:	68.7	64.0	44.0	39.0	15

5. (a) Find the value of $f'(0.5)$ using Sterling formula from the following data :

x:	0.35	0.40	0.50	0.55	0.60	0.65
y:	1.521	1.506	1.488	1.467	1.444	1.389

- (b) Evaluate $\int_0^6 \frac{dx}{1+x^2}$ by using Simpson's $\frac{1}{3}$ rd and Simpson's $\frac{3}{8}$ th rule and compare result with its actual value. 15

Unit-III

6. Consider the initial value problem $\frac{dy}{dx} = y - x^2 + 1$, $y(0) = 0.5$ Find $y(0.4)$ and $y(0.6)$ using fourth order Runge-Kutta method. 15
7. Solve numerically $\frac{dy}{dx} = x^2 + y^2 - 2$ using Milne's predictor - corrector method for $x = 0.3$ given the initial value $x = 0, y = 1$. The value of y for $x = -0.1, 0.1, 0.2$ should be computed by Taylor series expansion. 15

Unit-IV

8. Write an algorithm for Newton-Raphson method to solve the equation $f(x) = 0$. Apply the same to solve $\cos x - xe^x = 0$ near $x = 0.5$ correct to three decimal point. 15

9. Write a C++ program to solve the following equations by Gauss-Seidal method: 15

$$83x + 11y - 4z = 0;$$

$$7x + 52y + 13z = 104;$$

$$3x + 8y + 29z = 71.$$

Unit-III

6. Consider the initial value problem $\frac{dy}{dx} = y - x^2 + 1$, $y(0) = 0.5$. Find $y(0.4)$ and $y(0.6)$ using fourth order Runge-Kutta method. 15

7. Solve numerically $\frac{dy}{dx} = x^2 + y^2 - 2$ using Milne's predictor-corrector method for $x = 0.3$ given the initial value $x = 0, y = 1$. The value of y for $x = -0.1, 0.1, 0.2$ should be computed by Taylor series expansion. 15
